

## New Tools for Internal Machining

Dear business partners,

Our new catalogue „Internal boring bars“ is showing various new products for machining very small parts. A clearly arranged navigator makes it easier for you to find the tool you are looking for.

The well proven system **Minifix** has been supplemented with new geometries and thus, provides the highest degree of flexibility for **internal machining from a diameter starting from 0.7 mm.**

Our Minifix products are characterized by the brilliantly simple “V”-shaped clamping system. It guarantees a highly precise placement on centre height as well as an outstanding tool change accuracy.

For the system Minifix we now also offer new holders, which are adjustable in height, for back end machining.

Furthermore, our range of internal boring bars has been extended and now allows **internal machining of very small parts with ISO indexable inserts.**

Our new catalogue „Internal boring bars“ is available [here](#).

 **TURNING DAYS**  
Fachmesse für Zerspanungstechnik  
14. - 17 Februar 2017 - Friedrichshafen  
**Halle A3 - Stand Nr. D1**
