

Precisely Machining Spanner Flats

www.dieterle-tools.com

Dear business partners,

For the precise production of square or hexagonal spanner flats the proven system MINIFIX has been expanded with the new single toothed broaching tools MFE-ST:

By means of these new tools spanner flats are broached individually. Besides spanner flats with standard wrench sizes also spanner flats with special wrench sizes can be realized without the need for special tools. For each of our MFE-ST broaching tools a range of the width across flats (AF) is stated, which you can adjust flexibly based on your individual requirements. As the tolerance zone of the width across flats can be influenced, the process stability can be increased significantly.

Due to its brilliantly simple “V”-shaped clamping system, the proven MINIFIX tools guarantee a highly precise placement on centre height as well as outstanding tool change accuracy. A large variety of different inserts make the system MINIFIX highly flexible. You can use MINIFIX tools for boring, copying, grooving, thread chasing, face grooving and now also broaching.

Further information on the MFE-ST single toothed broaching tools is available [here](#).

Did you know? We are on Facebook now!

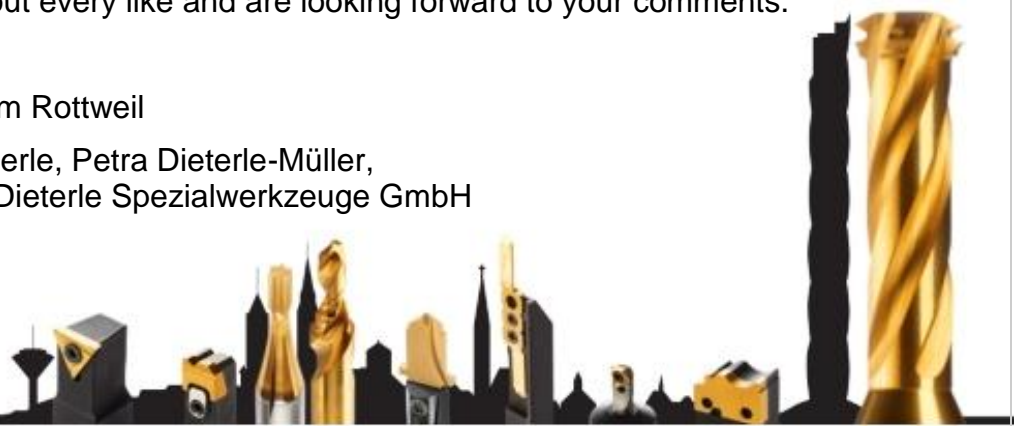

On our Facebook page www.facebook.com/Dieterle-Tools you will find the latest news about our tools, current trends in the machining industry and much more.

We are happy about every like and are looking forward to your comments.

Sending you best wishes from Rottweil
